PW_US_AC

USER STORIES AND ACCEPTANCE CRITERIA MANAGEMENT									
Project	PW — Business Partner Recognition & Verification Platform (NFT / Blockchain)								
Version	1.2								
Date	2026-10-16								
Description	Aligned with BRD v2.1: 36 user stories covering FR-001 to FR-035 (FR-014 and FR-015 merged into FR-010 and FR-011); BR codes follow BRD section 7A.								
No.	ID	Epic	As a (role)	I want (action)	So that (benefit)	User story	Acceptance Criteria	Note / Trace	Total AC
1	US-ON01	ONBOARDING & CLASSIFICATION	Visitor	join the waitlist from the Landing Page	I am notified when PW opens registration		Scenario 1 – Join with a valid email - Given the visitor is on the Landing Page - When the visitor enters a valid email and clicks "Join Waitlist" - Then the system saves the email to the waitlist - And displays "You're on the list. We'll email you when PW opens." Scenario 2 – Email already on the waitlist - Given the email already exists in the waitlist - When the visitor submits it again - Then the system does not create a duplicate record - And displays "This email is already registered." Scenario 3 – Invalid or empty email - Given the visitor is on the waitlist form - When the visitor submits an empty field or an email in the wrong format - Then the system displays "Please enter a valid email address." - And the email is not saved.	FR-001	3
2	US-ON02	ONBOARDING & CLASSIFICATION	Company / Individual	register a PW account and choose my account type (Company or Individual)	I can access the Member Dashboard and start the verification process		Scenario 1 – Register successfully - Given the user is on the Register page - When the user selects an account type, fills in all required fields with valid data and clicks "Create account" - Then the system creates the account with KYC status = "Not yet KYC" - And signs the user in and opens the KYC form.	FR-002. Individual / Public Figure is a full user (one entity, two views: account user & public Directory profile).	3

							Scenario 2 – Email already registered - Given an account already exists with the entered email - When the user clicks "Create account" - Then the system displays "This email is already registered. Log in instead?" - And no new account is created. Scenario 3 – Missing or invalid fields - Given the user leaves a required field empty or enters a password that does not meet the password policy - When the user clicks "Create account" - Then the system highlights each invalid field with an inline error - And does not create the account.		

3	US-ON03	ONBOARDING & CLASSIFICATION	Company / Individual	submit my KYC information and documents	PW can verify my identity before I buy, receive or own an NFT		Scenario 1 – Submit complete KYC - Given the user is logged in and KYC status = "Not yet KYC" or "Rejected" - When the user fills in all required KYC fields, uploads the required documents and clicks "Submit" - Then the system sets KYC status = "In Review" - And the request appears in the Admin KYC review queue. Scenario 2 – Company declares headcount - Given the account type is Company - When the user submits KYC - Then the headcount field is mandatory and is used to classify the business (US-ON04). Scenario 3 – Missing document or unsupported file - Given a required document is missing, or a file has an unsupported format/size (PDF, JPG or PNG, up to 25 MB) - When the user clicks "Submit" - Then the system shows an error on that field - And the KYC is not submitted. Scenario 4 – KYC pending - Given KYC status = "In Review" - When the user opens the Dashboard - Then the system shows the status "KYC under review" - And Purchase / Gift Title is disabled until KYC is Approved.	FR-003, BR-09. Company documents: Articles of Incorporation / Certificate of Good Standing / Business Registration Extract. Individual documents: Passport / National ID Card / Driver's Licence. A rejected member can re-submit without limit.	4
4	US-ON04	ONBOARDING & CLASSIFICATION	Company	have my business classified into Class 0–7 based on headcount	I am charged the correct price for my business size		Rule-Based: - The system maps the declared headcount to exactly one Class (0–7) using the configured headcount bands. - The Class is assigned when the Admin approves KYC and is shown on the Dashboard and Pricing page. - Price calculation (US-PT02) always uses the account's current Class. - A change of Class is recorded in the Audit Log (old Class, new Class, actor, time). - If headcount is missing, the business cannot be classified and KYC cannot be approved. - The Admin can correct the Class during KYC review.	FR-005, BR-01. Headcount bands: 1–10 → Class 0; 11–50 → 1; 51–200 → 2; 201–500 → 3; 501–1,000 → 4; 1,001–5,000 → 5; 5,001–9,999 → 6; 10,000+ → 7. An Individual is Class 0.	6

5	US-ON05	ONBOARDING & CLASSIFICATION	Registered user	log in with my email and password	I can access my Dashboard, wallet and NFTs securely		Scenario 1 – Log in successfully - Given the user has an account - When the user enters the correct email and password and clicks "Log in" - Then the system authenticates the user - And opens the Member Dashboard. Scenario 2 – Wrong credentials - Given the user is on the Log in page - When the user enters a wrong email or password - Then the system displays "Email or password is incorrect." - And does not reveal which of the two is wrong. Scenario 3 – KYC not yet approved - Given the user's KYC status is not "Approved" - When the user logs in - Then the Dashboard opens in limited mode with a banner showing the current KYC status and next step.	FR-006, NFR-003.	3
6	US-AW01	ACCOUNT & WALLET	Company / Individual	have a custodial wallet created for me automatically when my first NFT is issued	I have a place to hold my NFTs without managing private keys		Scenario 1 – Automatic creation on the first purchase - Given the user has no custodial wallet and has just paid for a Title for themselves - When the payment is confirmed - Then the system creates the custodial wallet via Circle before minting the NFT. Scenario 2 – Gift recipient or Award recipient without a wallet - Given a KYC-approved recipient has no custodial wallet - When a gifted Title or an Award is issued to the recipient - Then the system creates the custodial wallet via Circle and mints the NFT to it. Scenario 3 – Circle is unavailable - Given a wallet must be created for an order that was paid - When Circle returns an error or times out - Then no wallet is saved and no NFT is minted - And the order is handled as a mint failure: cancelled and a full refund requested (US-TN10). Scenario 4 – Wallet already exists - Given the user already has a	FR-007, BR-11. No wallet is created at registration and there is no manual "Create wallet" action.	4

							custodial wallet - When another NFT is issued - Then no new wallet is created (one custodial wallet per account).		
7	US-AW02	ACCOUNT & WALLET	Company / Individual	view my wallet details	I know my wallet address, custody type and what it holds		Scenario 1 – User has a wallet - Given the user has a custodial wallet - When the user opens "Wallet" - Then the system shows the PW wallet address (with copy action) and the number of NFTs held - And lists each linked non-custodial wallet with its name, address, link date and status "Verified". Scenario 2 – User has no wallet - Given the user has no wallet - When the user opens "Wallet" - Then the system shows an empty state: the wallet is created with the first Title, or the user can link a wallet they already own.	FR-008.	2
8	US-AW03	ACCOUNT & WALLET	Company / Individual	view all NFTs I own	I can track my Distinctions and Awards and what I can still do with each one		Scenario 1 – User owns NFTs - Given the user owns at least one NFT - When the user opens "My NFTs" - Then each NFT shows: name, category (Philanthropist / Investor / Bridge), type (Distinction / Award), status (Active / Revoked), custody (Custodial / Self-custody verified), token ID and issue date - And each Distinction shows whether its one-time transfer is still available; each Award shows "Soulbound – non-transferable". Scenario 2 – No NFTs - Given the user owns no NFT - When the user opens "My NFTs" - Then the system shows "You don't own any NFTs yet" with a "Browse Titles" action. Scenario 3 – Revoked NFT - Given an NFT owned by the user has been revoked - When the user views the list - Then the NFT is shown with status "Revoked" and no transfer action. Scenario 4 – NFT in an unlinked wallet - Given the user unlinked a wallet that held NFTs - When the user opens "My NFTs" - Then those NFTs are not listed and do not count toward ranking (BR-05).	FR-009, BR-05.	4

							- And linking the same wallet again brings them back.		
9	US-AW04	ACCOUNT & WALLET	Company / Individual	link my non-custodial wallet by connecting it and signing a message	NFTs I move there still count for my ranking		Scenario 1 – Link successfully - Given the user has no linked non-custodial wallet - When the user connects a wallet and signs the verification message - And the signed address matches the connected address - Then the system saves the wallet as "Linked – Verified" - And the wallet appears in the shared linked-wallet list (Dashboard and Transfer). Scenario 2 – User rejects or fails the signature - Given the user has connected a wallet - When the user rejects the signature request or the signature is invalid - Then the system displays "Wallet not linked. Signature was not completed." - And the wallet is not saved. Scenario 3 – Wallet already linked to another account - Given the wallet address is already linked to another PW account - When the user tries to link it - Then the system displays "This wallet is already linked to another PW account. Each wallet can be linked to one account only." - And the link is refused (1 wallet ↔ 1 account). Scenario 4 – Wallet already linked to the same account - Given the wallet is already in the user's linked-wallet list - When the user tries to link it again - Then the system displays "This wallet is already linked to your account." - And no second record is created.	FR-031, BR-07. Rule: 1 wallet ↔ 1 account. An account can link more than one wallet; all appear in one shared list.	4
10	US-AW05	ACCOUNT & WALLET	Company / Individual	unlink my non-custodial wallet	I can stop using a wallet I no longer control		Scenario 1 – Confirm unlink - Given the user has a linked non-custodial wallet - When the user clicks "Unlink" - Then the system shows a warning: "NFTs in this wallet will no longer count toward your ranking." - And when the user confirms, the wallet is removed from the linked list - And its NFTs are removed from the user's ranking and Directory	FR-032, BR-07.	2

							profile. Scenario 2 – Cancel - Given the warning is displayed - When the user clicks "Cancel" - Then nothing changes.		
11	US-TN01	TITLE & NFT	Company / Individual	browse the available Titles (Philanthropist, Investor, Bridge)	I can choose the Title that fits my business		Scenario 1 – Logged-in user with approved KYC - Given the user is logged in and KYC is Approved - When the user opens "Titles" - Then the system lists the 3 Titles with description and the price for the user's Class - And each Title has "Buy for myself" and "Gift" actions. Scenario 2 – KYC not approved - Given the user's KYC is not Approved - When the user opens "Titles" - Then Titles and prices are visible but the purchase actions are disabled with the message "Complete KYC to purchase a Title." Scenario 3 – Guest - Given the visitor is not logged in - When the visitor opens the Titles on the Landing Page - Then the Titles are listed without prices - And "Purchase a Title" asks the visitor to log in.	FR-011, BR-01. A guest sees the Titles without prices and is asked to log in to purchase.	3
12	US-TN02	TITLE & NFT	Company / Individual (buyer)	purchase a Title for myself	I receive a Distinction NFT that publicly proves my recognition		Scenario 1 – Purchase successfully - Given the buyer's KYC is Approved and the buyer selects a Title and "Buy for myself" - When the buyer reviews the price (after any discount) and clicks "Confirm & Pay" - And the Payment Gateway confirms the payment - Then the system creates a custodial wallet if the buyer has none - And mints the Distinction NFT to the buyer's wallet with status "Active" - And credits reward points (US-PT04), updates ranking and writes an Audit Log entry - And shows a success screen with the NFT details. Scenario 2 – Payment declined - Given the buyer is on the payment step - When the Payment Gateway	FR-012, FR-013, BR-08, BR-10, BR-11.	4

							declines the payment - Then the system displays "Payment was declined. You have not been charged." - And no NFT is minted and no points are credited. Scenario 3 – Buyer cancels before paying - Given the buyer is on the review step - When the buyer clicks "Cancel" - Then no Purchase Request is created. Scenario 4 – Payment succeeded but minting fails - Given the payment was confirmed - When minting fails - Then the order is cancelled, no points are credited and a full refund is requested (US-TN10).		
13	US-TN03	TITLE & NFT	Company / Individual (buyer)	gift a Title to another KYC-verified member by selecting the recipient	I can recognize a partner with a Distinction NFT		Scenario 1 – Select a KYC-verified recipient - Given the buyer selects a Title and "Gift to Someone" - When the buyer searches for the recipient by name or entity ID and selects a KYC-verified result - Then the recipient is shown and "Continue to Payment" becomes available. Scenario 2 – Recipient not KYC-verified - Given the buyer searches for a recipient whose KYC is not approved - When the result is shown - Then it is marked "Not verified" and cannot be selected - And "Continue to Payment" stays disabled. Scenario 3 – Gift paid successfully - Given a KYC-verified recipient is selected - When the payment is confirmed - Then the system creates the recipient's custodial wallet if missing and mints the Distinction NFT directly to it with status "Active" (no accept step) - And sends a Gift Notification to the recipient (US-TN04) - And credits points 10% to the buyer and 10% to the recipient - And the gift does NOT consume the recipient's one-time transfer. Scenario 4 – Recipient = buyer - Given the buyer selects	FR-012, FR-007, BR-03, BR-08. The recipient must be KYC-approved. The price follows the BUYER's Class. A gift is issued directly, not transferred.	4

							themselves - When the order is created - Then the system treats it as "Buy for myself".		
14	US-TN04	TITLE & NFT	Gift recipient	receive a notification when a Title is gifted to me	I know a Distinction NFT has been issued to me and by whom		Scenario 1 – Recipient is a PW member - Given a gifted Distinction NFT has been minted to the recipient's wallet - When minting is confirmed - Then the recipient is notified in the app (notification bell and notification screen) with the Title, the buyer's name and the NFT link - And no action is required from the recipient. Scenario 2 – Recipient is a listed entity without a PW login - Given the gift went to an entity that is listed in the Directory but has no PW account - When the NFT is minted - Then the NFT stays valid on-chain, shows on the entity's Directory card and the event is logged; no notification is sent.	FR-012. Accept/consent step removed (decision 2026-09-16).	2
15	US-TN05	TITLE & NFT	PW Platform (system)	mint an NFT automatically when a purchase is paid or an Award is granted	every issued Title or Award is recorded on-chain and verifiable		Rule-Based: - Minting is triggered only by (a) a confirmed payment for Purchase / Gift Title, or (b) an Admin Grant Award. There is no manual mint screen. - Purchase → Distinction NFT (transferable once). Grant → Award NFT (soulbound). - The NFT is minted directly to the recipient's wallet and is "Active" immediately. - The token ID, transaction hash, owner, type, category and issue date are saved and shown in "My NFTs" and the Directory. - Every mint writes an Audit Log entry. - If the blockchain call fails, the NFT is not shown as Active and the event is logged. A purchase or gift that was already paid is cancelled and a full refund is requested (US-TN10); there is no automatic retry.	FR-013, BR-11. Via Alchemy / smart contract.	6
16	US-TN06	TITLE & NFT	NFT owner	move my Distinction NFT to my own linked non-custodial wallet	I hold it myself and it still counts for my ranking		Scenario 1 – Transfer to an already linked wallet - Given the user owns an Active Distinction NFT in the custodial wallet whose one-time transfer is unused - And the user has a linked, verified non-custodial wallet - When the user selects that wallet and confirms	FR-010, FR-031, BR-06, BR-07. Any move out of the custodial wallet uses the one-time transfer; the NFT is then locked in the destination wallet.	4

							- Then the system transfers the NFT on-chain without asking for a new signature - And marks the one-time transfer as used - And the NFT keeps counting toward ranking. Scenario 2 – Transfer to a new own wallet - Given the destination wallet is not linked yet - When the user selects "Another address", enters the address, connects the wallet and signs the message, and the signed address matches the destination - Then the wallet is linked automatically and the transfer proceeds as in Scenario 1. Scenario 3 – Signature does not match - Given the user signs for a new destination address - When the signed address differs from the destination address - Then the system displays "The signature came from wallet …, which does not match the address you entered. Please sign with your own wallet." - And the transfer is not executed. Scenario 4 – Address linked to another account - Given the destination address is already linked to another PW account - When the user clicks "Continue" - Then the system displays "This wallet is already linked to another PW account. Each wallet can be linked to one account only." - And nothing is transferred.		

17	US-TN07	TITLE & NFT	NFT owner	be prevented from transferring an NFT that is not transferable	the transfer rules of PW are enforced		Rule-Based: - An Award NFT is soulbound: the Transfer action is hidden and any transfer request is refused with "Award NFTs are soulbound and cannot be transferred." - A Distinction NFT whose one-time transfer has been used cannot be transferred again ("This NFT has already used its one-time transfer."). - A Revoked NFT cannot be transferred. - Transfer to another owner is not supported: a Distinction NFT can only move once, to the member's own non-custodial wallet.	FR-010, BR-06.	4
18	US-TN08	TITLE & NFT	PW Platform (system)	update an NFT's custody status after the transfer is confirmed on-chain	owners and the public see where each NFT is really held		Scenario 1 – On-chain confirmation received - Given an NFT transfer to a linked/verified wallet has been submitted - When the transaction is confirmed on-chain - Then the system changes custody status from "Custodial" to "Self-custody (verified)" - And writes an Audit Log entry. Scenario 2 – Transaction pending or failed - Given the transaction is not yet confirmed - When the user views the NFT - Then the status shows "Transfer pending" - And if the transaction fails, the NFT stays "Custodial" and the one-time transfer is NOT consumed.	FR-033, BR-06.	2
19	US-TN09	TITLE & NFT	PW Platform (system)	periodically check linked wallets on-chain	ranking only counts NFTs still held in a verified wallet		Rule-Based: - The system checks every linked non-custodial wallet on a scheduled basis. - If an NFT is no longer in the linked wallet, it is removed from the owner's Ranking and Directory profile. - Each change found by the check is written to the Audit Log.	FR-034. ⚠ TBD: check frequency.	3
20	US-TN10	TITLE & NFT	Company / Individual (buyer)	be refunded when my payment went through but the NFT could not be issued	I am never charged for a Title I did not receive		Scenario 1 – Mint fails after payment - Given the payment was confirmed - When minting (or the creation of the custodial wallet) fails - Then the system cancels the order, credits no points and returns any points used in the order - And sends a refund request for the full amount to the Payment Gateway immediately - And tells the buyer "We could not	FR-035, BR-11, BR-12. ⚠ Finance to confirm the refund wording and processing time (BRD Appendix). 5–10 business days is when the card issuer shows the money; it is not a PW commitment.	3

							issue your Title. A full refund has been requested to your original card. Your bank usually takes 5–10 business days to show it." - And writes an Audit Log entry. There is no automatic retry. Scenario 2 – Refund request fails - Given a refund request was sent after a mint failure - When the Payment Gateway rejects it or does not answer - Then the system notifies the Admin to refund manually and logs the event. Scenario 3 – Gift - Given the failed order was a gift - When the refund is requested - Then the recipient is not notified, because no NFT was issued.		
21	US-PT01	POINTS / PRICING / DISCOUNT	Company / Individual	view the Title price table by Class	I understand what I will pay before purchasing		Scenario 1 – Logged-in user - Given the user is logged in and has a Class - When the user opens the Titles - Then the system shows the price of each Title for the user's own Class in CHF (an Individual is Class 0). Scenario 2 – Visitor (not logged in) - Given the visitor is not logged in - When the visitor opens the Titles on the Landing Page - Then the Titles are listed without prices - And "Purchase a Title" asks the visitor to log in.	FR-011, BR-01.	2
22	US-PT02	POINTS / PRICING / DISCOUNT	PW Platform (system)	calculate the Title price from the buyer's Class	every buyer is charged the correct amount		Rule-Based: - Base price = price of the selected Title for the buyer's Class (from the price table). - If the buyer is eligible for the Year-2 discount, the discount is 20% of the base price (US-PT03); points used (US-PT06) are deducted next. - The price summary shows base price, discount (if any), points used (if any) and the total in CHF before "Confirm & Pay"; the total is never below 0. - For a Gift, the price is based on the BUYER's Class. - All amounts are stored and displayed consistently (NFR-010).	FR-016, BR-01, BR-02, BR-04. An Individual is priced as Class 0. A gift is priced on the BUYER's Class.	5
23	US-PT03	POINTS / PRICING / DISCOUNT	Returning customer	automatically receive a 20% discount from my second year	I am rewarded for staying with PW		Scenario 1 – Eligible - Given the account has been active for at least 2 years since KYC approval - And the point balance is at least	FR-017, BR-02. ⚠ The 1,000-point threshold is a BA proposal for the Business to confirm (BRD Appendix).	2

							1,000 points - When the user reaches the price summary - Then the system applies a 20% discount and shows "Year-2 loyalty discount –20%". Scenario 2 – Not eligible - Given either condition is not met - When the user reaches the price summary - Then no discount is applied - And the system shows what is still missing (time or points).		
24	US-PT04	POINTS / PRICING / DISCOUNT	PW Platform (system)	distribute reward points after each paid transaction	buyers and recipients are rewarded and the system share is recorded		Rule-Based: - Points are 10% of the amount paid to the buyer, 10% to the recipient and 10% to the system pool. - If buyer = recipient the buyer earns 10% once. - Conversion: 1 CHF = 1 Point, rounded UP (e.g. 10% of 1,255 CHF = 125.5 → 126 points). - Points are credited only after the NFT is minted successfully; Admin-granted Awards and failed orders give 0 points. - Each credit creates a point transaction (account, amount, reason, reference, time) visible in point history.	FR-018, BR-03.	5
25	US-PT05	POINTS / PRICING / DISCOUNT	Company / Individual	view my point balance and history	I know how many points I have and where they came from		Scenario 1 – User has points - Given the user has point transactions - When the user opens "Points" - Then the system shows the current balance - And a history list (date, type Earned / Used / Adjusted, amount, reference) sorted newest first. Scenario 2 – No points yet - Given the user has no point transactions - When the user opens "Points" - Then the balance shows 0 and the message "Earn points when you buy or receive a Title."	FR-019.	2
26	US-PT06	POINTS / PRICING / DISCOUNT	Company / Individual	use my points	I get value from the points I have earned		Rule-Based: - 1 point reduces the total by CHF 1, up to the available balance and up to the Title price after the Year-2 discount; the balance can never go below 0. - Points are deducted only after the payment succeeds; each use creates a "Used" point transaction linked to the order. - If the order is cancelled or the	FR-020, BR-04.	3

							payment fails, the points stay in the balance.		
27	US-DR01	DIRECTORY & RANKING	Public Verifying User	browse and search the Public Directory	I can find companies and individuals recognized by PW		Scenario 1 – Browse - Given the visitor opens the Public Directory (no login needed) - When the page loads - Then the system lists KYC-approved entities with name, jurisdiction, number of NFTs and rank, ordered by ranking. Scenario 2 – Search, filter and sort - Given the visitor is on the Directory - When the visitor searches by name, jurisdiction or Title ID, filters by Title category, or sorts by ranking or name - Then only matching entities are shown in the chosen order. Scenario 3 – No result - Given no entity matches - When the search is run - Then the system displays "No entity matches". Scenario 4 – Member without approved KYC - Given a member's KYC is In Review or Rejected - When the visitor browses the Directory - Then that member is not listed until the Admin approves the KYC request.	FR-021.	4
28	US-DR02	DIRECTORY & RANKING	Public Verifying User	view a profile and the NFTs it holds	I can see what recognitions a company or individual has received		Scenario 1 – View profile - Given the visitor selects an entity in the Directory - When the profile opens - Then the system shows the public information (name, jurisdiction, registry number, "KYC verified" label, rank, number of NFTs) - And lists its NFTs: name, ID, issue date, issuing authority PW and status - And the profile link can be shared. Scenario 2 – Revoked NFT on a profile - Given one of the entity's NFTs has been revoked - When the visitor views the profile - Then that NFT is labelled "Revoked" and no longer counts toward the rank. Scenario 3 – Profile with no NFTs - Given the entity holds no NFT - When the visitor opens the profile	FR-022, FR-023. NFTs in an unlinked wallet are not shown (BR-05).	3

							- Then the NFT section shows that the entity has no Titles yet.		
29	US-DR03	DIRECTORY & RANKING	Public Verifying User	verify an NFT on-chain	I can confirm it is genuine and issued by PW		Scenario 1 – Valid - Given the visitor opens Verify and enters a token ID (or opens it from a profile) - When the token exists on-chain, was issued by PW's contract and is not revoked - Then the system shows "Valid" with owner, type, category, issue date and transaction link. Scenario 2 – Revoked - Given the token was issued by PW but has been revoked - When the visitor verifies it - Then the system shows "Revoked" with the revocation date. Scenario 3 – Invalid - Given the token does not exist or was not issued by PW - When the visitor verifies it - Then the system shows "Invalid – this NFT was not issued by PW."	FR-024, NFR-005. The result returns within 5 seconds.	3
30	US-DR04	DIRECTORY & RANKING	PW Platform (system)	calculate the ranking automatically	the Directory always reflects each account's real standing		Rule-Based: - Rank is ordered by the total number of counted NFTs, highest first. - Every NFT counts equally (an Award counts like a Distinction); revoked NFTs are not counted. - An NFT counts only while it is in the PW custodial wallet or in a linked wallet verified by signature; NFTs in an unlinked wallet are not counted. - When two entities have the same number, registered members are listed first. - Ranking is recalculated after every purchase, gift, Award, revoke, unlink and when an NFT leaves a linked wallet.	FR-025, BR-05.	5
31	US-AD01	ADMINISTRATION	PW Admin	review KYC submissions and approve or reject them	only verified entities can own and receive NFTs		Scenario 1 – Approve - Given a KYC request is "In Review" - When the Admin checks the documents (and, if needed, corrects the Class) and clicks "Approve" - Then KYC status = "Approved" and the Class is assigned (US-ON04) - And the member sees the Approved result, can purchase Titles and is listed in the Directory. Scenario 2 – Reject	FR-004, BR-09.	3

							- Given a KYC request is "In Review" - When the Admin clicks "Reject" and selects/enters a reason (required) - Then KYC status = "Rejected" and the reason is shown to the member - And the member can re-submit without limit. Scenario 3 – Reject without reason - Given the Admin clicks "Reject" - When no reason is provided - Then the system blocks the action with "Reason is required." - Rule: every decision is written to the Audit Log (KYC_APPROVE / KYC_REJECT).		
32	US-AD02	ADMINISTRATION	PW Admin	grant an Award to a verified company or individual	PW can honor outstanding partners with a soulbound Award NFT		Scenario 1 – Grant successfully - Given the Admin opens "Grant Award" - When the Admin selects a recipient whose KYC is Approved, chooses the Award category (Investor / Philanthropist / Bridge), enters the citation and confirms - Then the system mints a soulbound Award NFT directly to the recipient (Active) - And credits 0 points, updates Ranking, notifies the recipient and writes an Audit Log entry. Scenario 2 – Recipient not KYC-verified - Given the selected recipient's KYC is not Approved - When the Admin tries to grant - Then the system blocks it with "KYC not verified" and does not grant the Award Scenario 3 – Recipient has no wallet - Given the recipient is KYC-approved and has no PW wallet - When the Admin grants the Award - Then the system creates the recipient's custodial wallet and mints the Award to it. Scenario 4 – Minting fails - Given the Admin has confirmed the grant - When the blockchain call fails - Then the system shows "Award could not be issued. Please try again." and no Award is shown as Active.	FR-026, FR-007, BR-08. Award uses the same 3 categories as Titles but is free and soulbound (BR-06).	4

33	US-AD03	ADMINISTRATION	PW Admin	revoke an NFT (Distinction or Award)	invalid or misused recognitions are no longer shown as valid		Scenario 1 – Revoke successfully - Given the Admin opens "Revoke NFT" and finds an Active NFT by token ID or owner - When the Admin selects a reason (required), optionally adds a note (max 500 characters), ticks the confirmation checkbox and clicks "Revoke NFT" - Then the NFT status = "Revoked" (irreversible) - And Verify returns "Revoked", the owner is notified and an Audit Log entry is written. Scenario 2 – Missing reason or confirmation - Given the reason is empty or the checkbox is not ticked - When the Admin clicks "Revoke NFT" - Then the button stays disabled / the system shows the missing field. Scenario 3 – Non-admin - Given a user without the Admin role - When they try to access Revoke NFT - Then access is denied. Scenario 4 – On-chain update fails - Given the Admin confirmed the revoke - When the on-chain update fails - Then the NFT status does not change and the Admin sees an error.	FR-027, BR-13. Only Admin can revoke.	4
34	US-AD04	ADMINISTRATION	PW Admin	manually adjust a user's points	I can correct errors and handle exceptions		Scenario 1 – Adjust successfully - Given the Admin opens a user's point account - When the Admin enters a positive or negative amount and a reason (required) and confirms - Then the balance is updated and a point transaction of type "Adjusted" is created - And an Audit Log entry records admin, user, old balance, new balance, reason and time. Scenario 2 – Would make balance negative - Given the deduction is larger than the current balance - When the Admin confirms - Then the system blocks it with "Balance cannot go below 0."	FR-028.	2
35	US-AD05	ADMINISTRATION	PW Admin	view and filter the Audit Logs	every important action can be traced for compliance		Scenario 1 – View logs - Given the Admin opens "Audit Logs"	FR-029, NFR-002.	3

							- When the page loads - Then the system lists entries (time, signer, action, target, reason, hash) newest first - And entries are read-only (cannot be edited or deleted). Scenario 2 – Filter - Given the Admin is on Audit Logs - When the Admin filters by date range, signer, action type (for example KYC, Mint, Transfer, Revoke, Points) or searches by target - Then only matching entries are shown. Scenario 3 – No result - Given no entry matches - When the filter is applied - Then the system shows that no entry matches		
36	US-AI01	AI ASSISTANT	Company / Individual / Visitor	ask the AI Assistant questions about PW, my NFTs and which Title fits me	I get guidance quickly without contacting support		Scenario 1 – Platform question - Given the user opens the AI Assistant - When the user asks a question about PW (e.g. "How do points work?") - Then the Assistant answers within 2–5 seconds under normal load. Scenario 2 – NFT lookup - Given the user is logged in - When the user asks about one of their NFTs - Then the Assistant returns that NFT's details (type, status, custody, transfer availability) - And never shows another user's private data. Scenario 3 – Title recommendation - Given the user describes their business activity - When the user asks which Title fits - Then the Assistant suggests one of Philanthropist / Investor / Bridge with a short reason. Scenario 4 – Out-of-scope question - Given the question is not related to PW - When the user sends it - Then the Assistant replies that it can only help with PW topics. Scenario 5 – Advice the Assistant does not give - Given the user asks for investment, legal or tax advice - When the user sends the	FR-030, NFR-001. Scope decided (BRD Appendix): answers from the platform documentation, NFT lookup (own NFTs and public entity data), guidance and Title recommendations by purpose.	5

							question - Then the Assistant politely refuses and says it can only explain PW.
